

or mixer to amplify the movement of the feet.

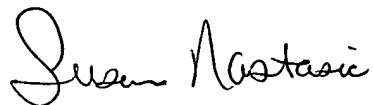

2. A portable stage/platform as claimed in claim 1 wherein a protective housing is situated underneath the said stage to house and secure the said microphone while in use.

3. A portable stage/platform as claimed in claim 2 having sloped sides if deemed necessary for safety and surer footing.

ABSTRACT

An extremely light and portable stage/platform that while being performed upon, is capable of amplifying the movement of the feet by having a microphone or sound pick-up mounted underneath and subsequently plugged into an amplifying source such as an amplifier or mixer board.
